Editorial

Advances of Econometrics and Statistics (EcoSta), 2nd issue

The joint annual conference of the working group on Computational and Methodological Statistics (CMStatistics) and the network of Computational and Financial Econometrics (CFEnetwork) is endorsed by the journal Econometrics and Statistics (EcoSta). The joint conference usually has more than 1500 paper presentations. It is a leading joint international meeting at the interface of statistics, econometrics, empirical finance and computing. The conference aims at bringing together researchers and practitioners to discuss recent developments in computational methods for economics, finance, and statistics.

From those conference papers that have been submitted to the EcoSta journal, only eleven papers have been accepted for inclusion in the second issue of the Advances of Econometrics and Statistics (Advances of EcoSta) after a rigorous peer-review process (Amendola, et al., 2021, Chronopoulos et al., 2021, Baranyi and Bolla, 2021, Funke and Hirukawa, 2021, Hauzenberger, 2021, Hecq and Voisin, 2021, Hristache and Patilea, 2021, Maciak, 2021, Morales-Onate, et al., 2021, Seri, et al., 2021, Wenger and Leschinski, 2021).

The Editors and coordinators of the CMStatistics and CFEnetwork would like to thank all the authors who have submitted their papers for consideration to the EcoSta journal. Furthermore, they express their appreciation to the EcoSta associate editors and referees for having assisted with the rigorous peer-review process of the papers.
